

Projective truth and causal logic

Short name: **plg_en.pdf**

This article is rebuilt from Monograph 2.4. It begins with an abstract, a shared NAPRLK / NAPG 2.0 context note, and a local table of contents, followed by the extracted and verified core text.

Abstract

The English article isolates the logical-geometric core available in the English monograph build: projective truth, the operators of action/change/reversal, and the tensorial reading of causality.

Shared NAPRLK / NAPG 2.0 context

In the English branch of NAPRLK / NAPG 2.0 the logical node is expressed through projective truth, nontrivial closure of action, and causal readability across layers.

Article contents

1. Quadratic obstruction and projective truth
2. Operators of action, change, and reversal
3. The tensorial nature of causality

Source: Monograph 2.4 EN, chapters 3–5

CHAPTER 3

Quadratic obstruction and projective truth

egindefinition[Quadratic

obstruction]

The quadratic obstruction is the class

\mathcal{O}_B arising from the quadratic part of the deformation equation.

It
